

The Bioremediation in the Field Search System

*EPA's
Bioremediation
Field Initiative is
pleased to announce
the release of
Version 2.1
of the
Bioremediation in
the Field Search
System (BFSS),
an information-
sharing resource
for federal and
state regulators,
consulting engineers,
industry personnel,
and researchers
interested in the
field application of
bioremediation.*

What is the Bioremediation in the Field Search System (BFSS)?

BFSS is a PC-based software product that provides access to a database of information on waste sites across the country where bioremediation is being tested or implemented, or has been completed. BFSS allows users to search the database electronically, view data on specific types of bioremediation sites, and print reports of selected information.

What type of information is in the BFSS database?

BFSS currently provides electronic access to information on approximately 500 bioremediation sites nationwide. The database spans both full-scale remediation efforts and treatability and feasibility studies, and covers sites under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Toxic Substances Control Act (TSCA), and Underground Storage Tank (UST) authority. Data include:

- Location—Region, state, and city or county
- Media—Soil, surface and ground water, sediments, and sludge
- Contaminants—Wood preserving wastes, petroleum, solvents, pesticides, and others
- Ex situ and in situ technologies—Reactor treatments, aerated lagoon treatment, land treatment, composting, air sparging, and bioventing
- Cost and performance—Capital and operation and maintenance costs, rate of contaminant degradation, and lowest contaminant concentration achieved

How does BFSS work?

Accessing information through BFSS is simple:

- ① The user selects one or several search criteria from among contaminant and media being treated, technology, location, authority, or status of treatment operations.
- ② BFSS retrieves a list of sites that match the criteria specified by the user.
- ③ The user views information about the sites on-line or prints site reports, which provide detailed records of information on each site.

*A cooperative effort of the
U.S. EPA's Office of Research
and Development,
Office of Solid Waste and
Emergency Response,
and regional offices,
and other federal agencies,
state agencies, industry, and
universities to expand the
nation's field experience
in bioremediation
technologies for Superfund
and other contaminated sites.*

How can I get a copy of BFSS?

BFSS is available from EPA's Alternative Treatment Technology Information Clearinghouse (ATTIC) bulletin board system (BBS) (513-569-7610, telnet: cinbbs.cin.epa.gov), Office of Research and Development (ORD) web site (<http://www.epa.gov/ord> and <http://www.epa.gov/ORD/WebPubs/bioremed/>), and Cleanup Information (CLU-IN) BBS (301-589-8366) and web site (<http://clu-in.com>). The software is designed to be downloaded and operated off a hard disk or a local area network (LAN). To request a copy of the system, call 513-569-7562. To register as a user and receive EPA's *Bioremediation in the Field* bulletin, as well as notices of system updates, call EPA's National Risk Management Research Laboratory (NRMRL) at 513-569-7562.

How can I contribute to the BFSS database?

The Bioremediation Field Initiative is continually adding new sites to the BFSS database. If you are aware of a site suitable for inclusion, please write to BFSS Support, Eastern Research Group, Inc. (ERG), 110 Hartwell Avenue, Lexington, MA 02173-3134 or fax to 617-674-2851. Once you provide information on a site, this information will be made available through BFSS to the community of users, and you will be given the opportunity to update the site status on a semiannual basis.
